Abstract

In this presentation, Professor Yu XIE will first document a sharp rise in economic inequality in contemporary China. He will then present results from his research program on the impact of rising economic inequality on a variety of social and demographic outcomes in China: intergenerational mobility, marriage age, marriage partner choice, fertility, and mortality.

Prof. Yu XIE is Bert G. Kerstetter '66 University Professor of Sociology and PIIRS at Princeton University. His main areas of interest are social stratification, demography, statistical methods, Chinese studies, and sociology of science.

Prof. XIE's main areas of interest are social stratification, demography, statistical methods, Chinese studies and sociology of science. He is a member of the American Academy of Arts and Sciences, Academia Sinica and the National Academy of Sciences. His published works include: *Marriage and Cohabitation* (University of Chicago Press 2007) with Arland Thornton and William Axinn, *Statistical Methods for Categorical Data Analysis* with Daniel Powers (Emerald 2008, second edition), and *Is American Science in Decline?* (Harvard University Press, 2012) with Alexandra Killewald.

Prof. XIE earned his bachelor's degree at Shanghai University of Technology, and two master's degrees and a doctoral degree at the University of Wisconsin-Madison.

Co-organized by The Inequality and Methods Cluster, Center for Population Research (CPR)
